A Waste Management Company

Charles Washburn  
c/o Environmental Remediation Technology  
705 Highway 80 West  
Clinton, MS 39056

Dear Mr. Washburn,

Based on the Material Safety Data Sheet and the sample leachability test results (TCLP) from a hydrocarbon material absorbed by an Enretech product, Waste Management, Inc. could approve disposal of this waste stream in most of its Subtitle D landfills. Obviously, Waste Management will require separate profiles on each waste stream generated by the generator. This profile will allow Waste Management to identify if the disposed material is either hazardous characteristically or by EPA definitions.

In addition, Waste Management will provide containers on an individual rental basis along with scheduled pick up dates for the disposal of waste absorbed by Enretech products, provided that the waste stream meets the guidelines for disposal into Subtitle D landfills.

If you have any questions please do not hesitate to contact me at 1-601-923-5132. We are looking forward to servicing the disposal needs of your customers in any way we can.

Sincerely,  
Waste Management of  
Mississippi, Inc.

Albert J. Ott  
Technical Manager
