Dear Nancy,

This letter is being forwarded to your company to express our delight in your Gator Absorbant Product Line. We have been using the products for demonstration purposes in our hazardous materials training programs for approximately three months and are very impressed with the product's ability to absorb hydrocarbon based fuels. Each time we demonstrate the product for our classes we find more and more interest in your products line from our students.

The ability of Gator Products to encapsulate hydrocarbons is amazing within itself, however, the additional benefit of ease of disposal makes the product even more appealing. The Gator Oil Absorbant, Cell-U-Sorb and Acid Gator are remarkable products that will be a tremendous asset to anyone who deals with spills of hazardous material. Also, your Absorbant pads and booms have the best absorbing and retention properties than any other products we have used.

In closing, we appreciate your company's commitment to making our environment safe and clean with the Gator Product Line and your continued effort in making these products available at a lower cost.
